Report Generated: Thursday, July 30, 2026 at 6:31 PM

Time on Task: 2 hours, 43 minutes
Progress: 100%

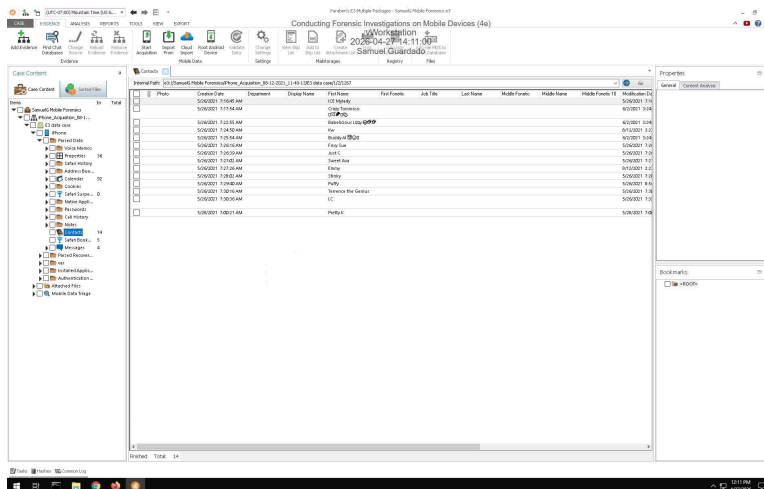

Section 1: Hands-On Demonstration

Part 1: Identify Forensic Evidence in an iOS Data Case

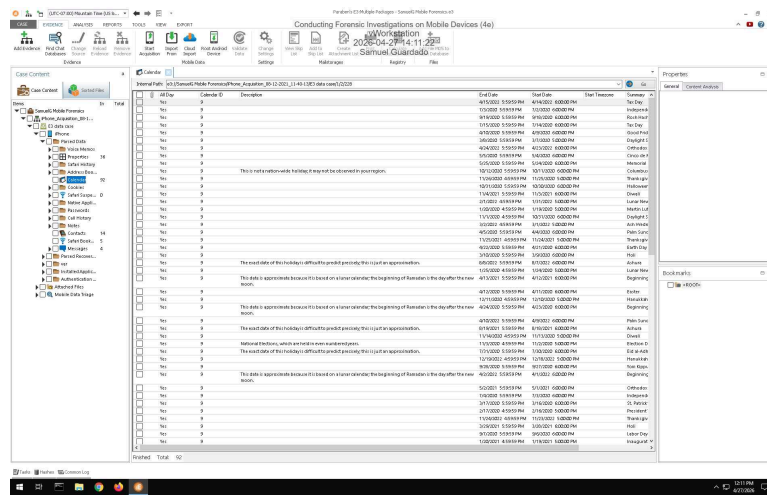

8. Make a screen capture showing the contents of the Properties pane.

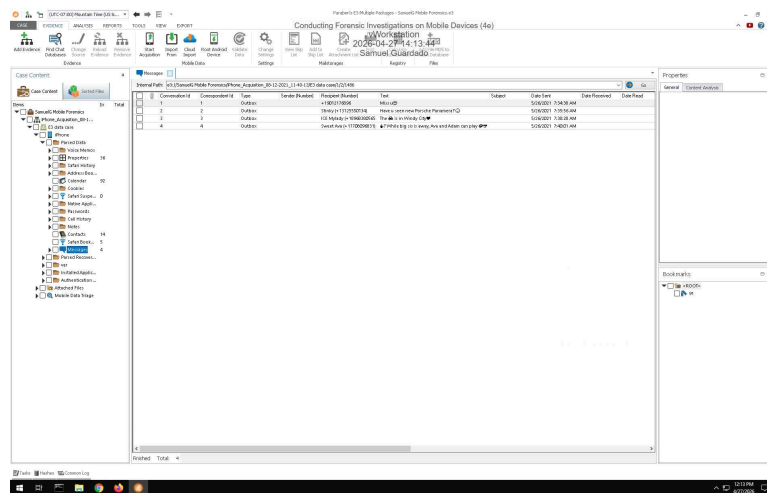

11. Make a screen capture showing the contents of the Contacts grid.

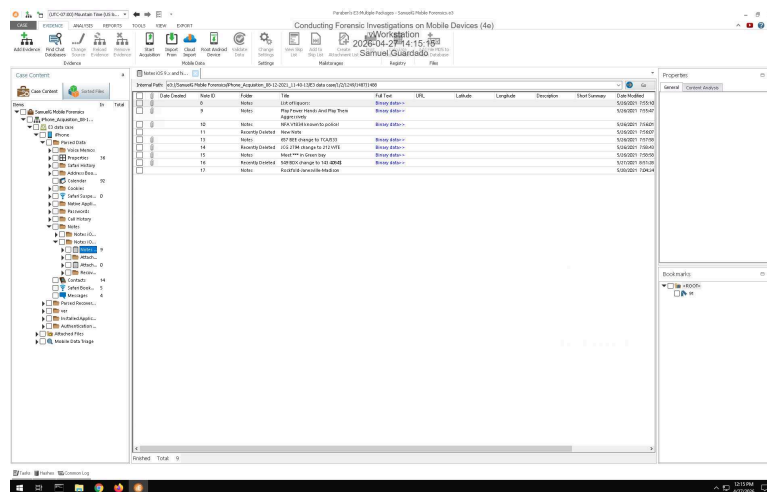

14. Make a screen capture showing the contents of the Calendar grid.

20. Make a screen capture showing the contents of the Messages grid.

24. Make a screen capture showing the contents of the Notes grid.

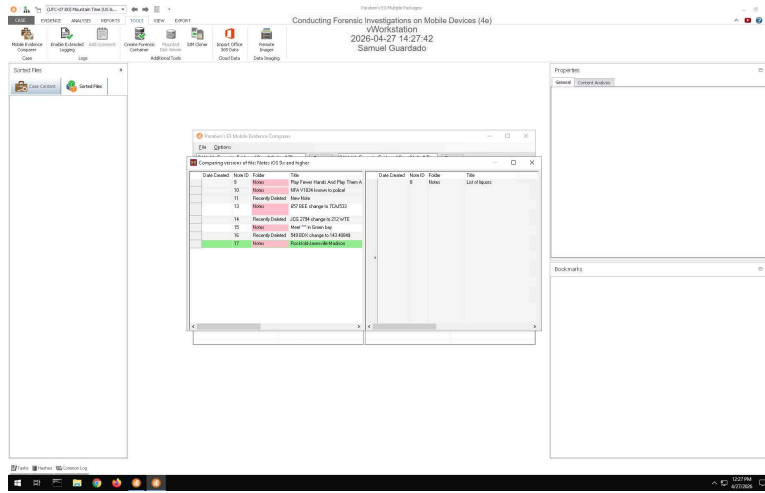

34. Make a screen capture showing at least two car pictures in the Thumbnail View.

10. **Make a screen capture** showing the **difference in data case properties**.

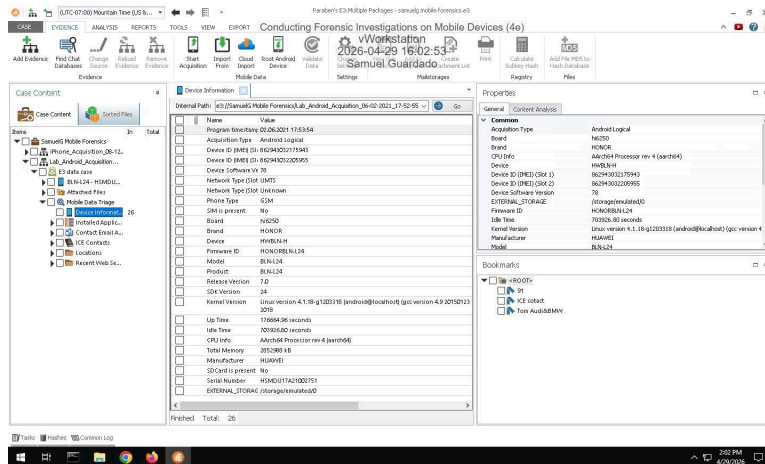

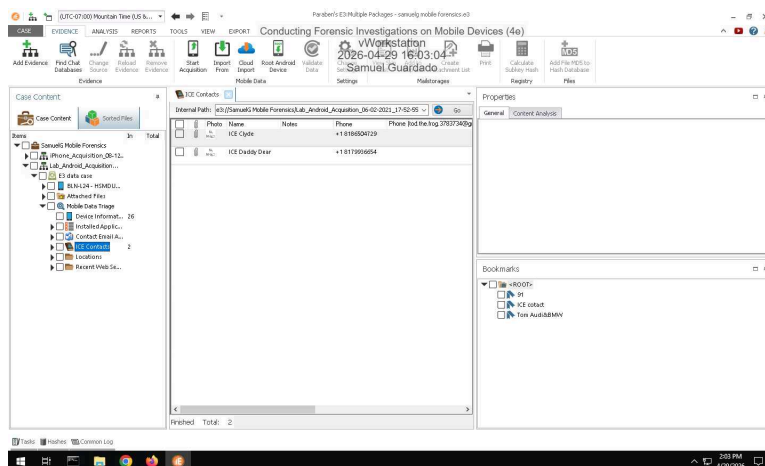

Section 2: Applied Learning

Part 1: Identify Forensic Evidence in Android User Data

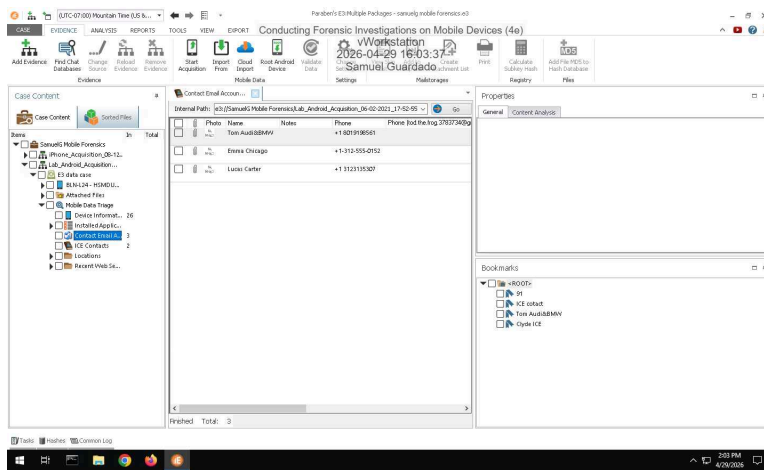

7. Make a screen capture showing the **Device Information**.

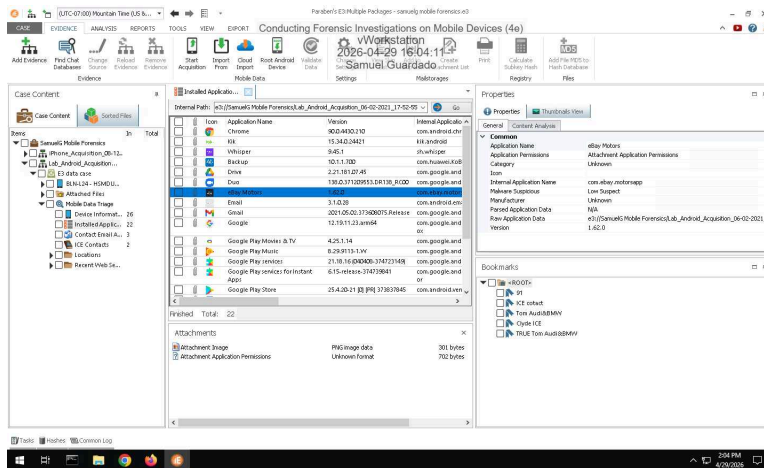

9. Make a screen capture showing the **ICE Contacts**.

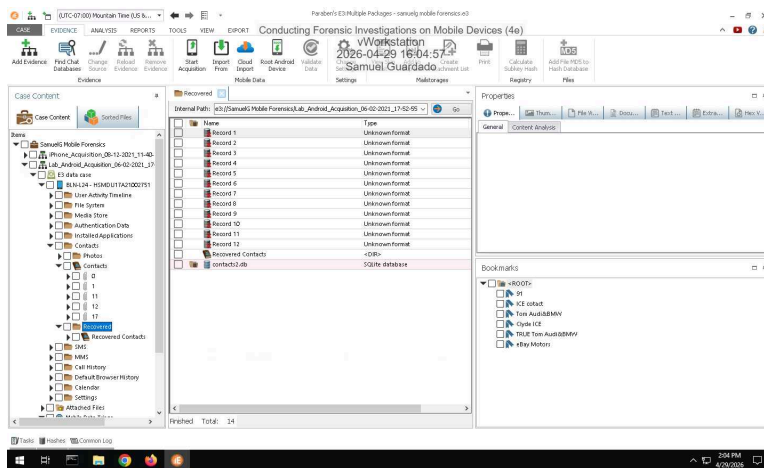

12. Make a screen capture showing the **Contact Email Accounts**.

15. Make a screen capture showing the **Installed Applications**.

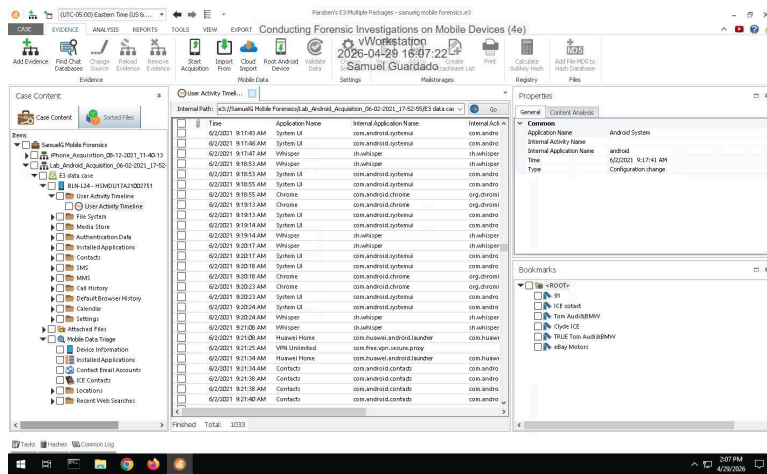

19. Make a screen capture showing the **recovered contact information from the Android phone**.

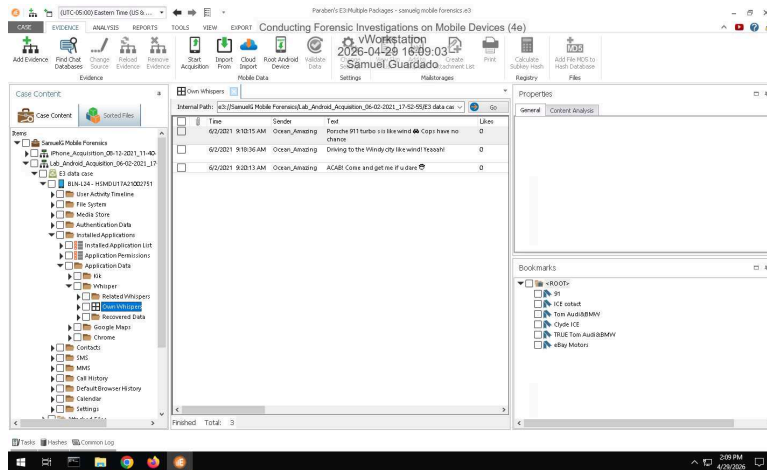

Part 2: Identify Forensic Evidence in Android Application Data

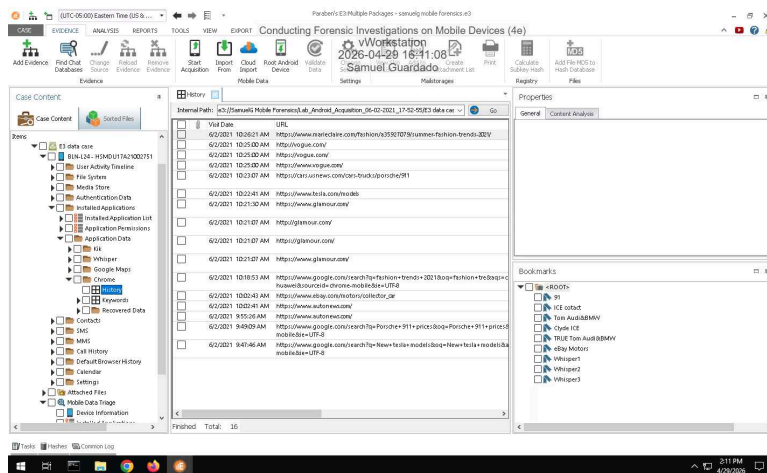

4. Make a screen capture showing the **User Activity Timeline** between 9:17:47 AM and 9:24:51 AM on 6/2/2021.

7. Make a screen capture showing the contents of the Own Whispers grid.

10. Make a screen capture showing the contents of the History grid.

17. Make a screen capture showing the contents of the list_item 1-5 table.

Prepare a brief summary of the appropriate structure and best practices for preparing a digital forensics report.

7

Beginning with the overview of the case, this portion of the report will explain why an investigator decided to investigate, who asked them to do so and what evidence they investigated. At least some amount of historical and contextual information about the case will be included within this part of the report to assist readers who may not be familiar with all aspects of the case. Following the overview will be the acquisition and preparation of the evidence. This area of the report will outline how investigators acquired and maintained the integrity of the evidence including what tools were used to collect and preserve the evidence, what methods were used to verify the authenticity of the evidence (i.e., hashes) and what procedures were followed to ensure the chain of custody. The next area of the report is entitled "Findings and Analysis". This area of the report represents the largest and most detailed section of the report. Within this area of the report, investigators are expected to include detailed descriptions of the evidence which was located as a result of their investigation along with supporting documentation which would include; screenshots, time stamps, tool output etc. Investigators are also expected to have identified patterns or trends from their analysis and document these items in detail within this area of the report. Finally, there is the "Conclusion" area of the report. This area of the report is intended to provide a summary of the results of the investigation along with explanations regarding what each piece of evidence indicates. Best Practices for Writing Digital Forensics Reports: Use simple language, do not show bias and remain neutral, record all steps taken from beginning to end of your investigation, incorporate screen shots and other forms of supporting evidence, document each item, and be organized.

Part 2: Draft a Forensic Report

Case Summary

We have been investigating an organized car theft operation, leading to the suspects known as Clyde and Bonnie. After confiscating the suspects' smartphones (an iPhone and an Android device), we analyzed the contents of the phones to identify evidence of the car theft.

Findings and Analysis

We confirmed the owner of the iPhone 12 is an individual known as Clyde. After analyzing the phone we found 11 car pictures along with their corresponding license plate numbers, which gives us a link of involvement in car theft. Furthermore, the Android device was associated to Bonnie, the email associated with the phone is julriley1990@gmail.com. Where we found a list of stolen cars, and how they were able to change their license plates. (ex. 657BEE to 7CAJ533). We also discovered suspicious applications like Whisper, and a VPN.

Conclusion

After conducting a forensic analysis on both of the suspects' devices, we found significant evidence like names (Bonnie and Clyde), pictures of several cars, license plate numbers, contact information, suspicious applications. These findings provide crucial evidence for the ongoing investigation, and strengthen the case against the current suspects.
