Report Generated: Thursday, July 30, 2026 at 5:19 PM

Time on Task: 2 hours, 59 minutes
Progress: 100%

Hands-On Demonstration

Part 1: Configuring Database Access

8. **Make a screen capture** showing the list of tables in the *art* database.

13. **Make a screen capture** showing the create table command for the link table.

19. **Make a screen capture** showing the error message.

Part 3: Secure Communication Between Parts of a Web Service

15. Make a screen capture showing the running containers.

18. Make a screen capture showing the response from the App (http) link.

20. Make a screen capture showing the response from the origin (http) link.

32. Make a screen capture showing the response.

36. Make a screen capture showing the error page from the origin server.

Applied Learning

Part 1: Configure Database Access Using Roles

12. Make a screen capture showing the permission error for testing using the art database.

Part 1: Strengthen Database Security Using a Stored Procedure

1. Make a screen capture showing a failed attempt to directly read the artists table with the new user.

2. Make a screen capture showing a successful use of the `get_artist` stored procedure.

Part 2: Demonstrate the Secure Link Between the Web Servers

1. Document how the tcpdump results indicate that the traffic is encrypted.

It indicates the traffic is encrypted because the packet contents are no longer readable in plain text. Before TLS was enabled, the HTTP requests and headers can were exposed, and visible. After enabling TLS, the packets and data cant be intercepted by packet capture.
